## **ABSTRACT**

A method of delivering a packet from a first device in a first piconet of a scatternet to a destination device in a second piconet of the scatternet comprising: creating a direct radio communications link between the first device and the destination device; and transmitting the packet via the direct radio communications link. Alternatively, a method of delivering a packet from a first device in a first piconet of a scatternet to a destination device in a second piconet of that scatternet comprising: creating a third piconet between the first piconet and the second piconet; and transmitting the packet via the third piconet. Alternatively, a method of delivering a packet from a first device in a first piconet of a scatternet to a destination device in a second piconet of the scatternet comprising: receiving the packet at the first device; determining whether the creation of a direct radio communications link between the first device and the destination device is possible; and if it is not possible, forwarding the packet within the scatternet.
